**AMENDMENTS TO THE CLAIMS** 

1. (Original) A gamma correction device in an image capturing apparatus, the

gamma correction device performing gamma correction on a video signal from an image

capturing element on the basis of at least one correction curve having a predetermined

input-output characteristic, wherein said at least one correction curve has a slope of 5.0

or less at the origin such that a corrected video signal conforms to film properties.

2. (Original) The gamma correction device in the image capturing apparatus

according to claim 1, wherein the slope of said at least one correction curve at the origin

is settable based on various conditions.

3. (Original) The gamma correction device in the image capturing apparatus

according to claim 1, wherein said at least one correction curve comprises a plurality of

correction curves having different slopes and being selectable based on various

conditions.

4. (Previously Presented) A gamma correction device in an image capturing

apparatus, the gamma correction device performing gamma correction on a video signal

from an image capturing element on the basis of at least one correction curve having a

predetermined input-output characteristic, wherein said at least one correction curve

comprises a composite of a first correction curve segment lying from the origin to a

predetermined level of an input signal such that a corrected video signal conforms to a

cathode-ray tube monitor and a second correction curve segment lying above the

predetermined level of the input signal such that the corrected video signal conforms to

film properties, and both correction curve segments are continuously combined and have

the same slope at the predetermined level of the input signal.

2

- 5. (Original) The gamma correction device in the image capturing apparatus according to claim 4, wherein the predetermined level of the input signal is settable based on various conditions.
- **6.** (Original) The gamma correction device in the image capturing apparatus according to claim 4, wherein said at least one correction curve comprises a plurality of correction curves having different predetermined levels of the input signals and being selectable based on various conditions.
- 7. (Previously Presented) The gamma correction device in the image capturing apparatus according to claim 1, wherein the image capturing apparatus is a video camera.
  - 8. (Cancelled).
- 9. (Currently Amended) The gamma correction device in the image capturing apparatus according to claim-8\_1, wherein said at least one correction curve <u>has a slope</u> of between 1.0 and 5.0 at the origin, indicates an output level less than 100% when the input level is less than 200%, indicates an output level of at least 100% when the input level is greater than 400%, and is of differentiability class C<sup>1</sup> on the domain [0, 200%].
- 10. (Previously Presented) The gamma correction device in the image capturing apparatus according to claim 9, wherein said at least one correction curve is an analytic function on the domain [0, 200%].

## 11. (Cancelled).

- 12. (Currently Amended) The gamma correction device in the image capturing apparatus according to claim—11\_1, wherein said at least one correction curve has a slope of between 1.0 and 5.0 at the origin, indicates an output level less than 100% when the input level is less than 300%, indicates an output level of at least 100% when the input level is greater than 350%, and is of differentiability class C¹ on the domain [0,300%].
- 13. (Previously Presented) The gamma correction device in the image capturing apparatus according to claim 12, wherein said at least one correction curve is an analytic function on the domain [0,300%].
  - 14. (Cancelled).
- 15. (Previously Presented) The gamma correction device in the image capturing apparatus according to claim 1, wherein said at least one correction curve is of the form

$$Signal_{OUT} = a * \log_{10}(Signal_{IN} + b) + c$$

- 16. (Previously Presented) The gamma correction device in the image capturing apparatus according to claim 15, where (a) is between 0.5 and 0.7, (b) is between 0.01 and 0.1, and (c) is between 0.6 and 0.8.
- 17. (Previously Presented) The gamma correction device in the image capturing apparatus according to claim 1, wherein said at least one correction curve indicates less compression in the lower levels of the input signal than would a correction curve of the form

$$Signal_{OUT} = a * (Signal_{IN})^{\gamma}$$

having similar performance in the higher levels of the input signal.

- 18. (Previously Presented) The gamma correction device in the image capturing apparatus according to claim 17, wherein said at least one correction curve is of differentiability class C<sup>1</sup> on the domain of input signal levels.
- 19. (Previously Presented) The gamma correction device in the image capturing apparatus according to claim 18, wherein said at least one correction curve is an analytic function on the domain of input signal levels.
- 20. (Previously Presented) The gamma correction device in the image capturing apparatus according to claim 1, wherein said at least one correction curve indicates less compression in the higher levels of the input signal than would a correction curve of the form

$$Signal_{OUT} = a * (Signal_{IN})^{\gamma}$$

having similar performance in the lower levels of the input signal.

- 21. (Previously Presented) The gamma correction device in the image capturing apparatus according to claim 20, wherein said at least one correction curve is of differentiability class C<sup>1</sup> on the domain of input signal levels.
- 22. (Previously Presented) The gamma correction device in the image capturing apparatus according to claim 21, wherein said at least one correction curve is an analytic function on the domain of input signal levels.

Amendment dated January 18, 2008 Reply to Office Action of October 22, 2007

23. (Previously Presented) The gamma correction device in the image capturing

apparatus according to claim 4, wherein the image capturing apparatus is a video camera.

24. (Cancelled).

25. (Currently Amended) The gamma correction device in the image capturing

apparatus according to claim-24 4, wherein said at least one correction curve has a slope

of between 1.0 and 5.0 at the origin, indicates an output level less than 100% when the

input level is less than 150%, indicates an output level of at least 100% when the input

level is greater than 350%, and is of differentiability class C<sup>1</sup> on the domain [0, 200%].

26. (Cancelled).

27. (Previously Presented) The gamma correction device in the image capturing

apparatus according to claim 4, wherein said first correction curve segment corresponds

to the ITU-709 characteristic curve.

28. (Previously Presented) The gamma correction device in the image capturing

apparatus according to claim 4, wherein said second correction curve segment is of the

form

$$Signal_{OUT} = a * \log_{10}(Signal_{IN} + b) + c$$

29. (Previously Presented) The gamma correction device in the image capturing

apparatus according to claim 4, wherein said first correction curve segment corresponds

Docket No.: SON-2973

to the ITU-709 characteristic curve and said second correction curve segment is of the form

$$Signal_{OUT} = a * \log_{10}(Signal_{IN} + b) + c$$
